Farmer answers

When did you first notice the symptoms?
Not sure

Is this affecting one plant or several plants?
Not sure

What changes have you noticed?
Not sure

Have watering, shade or plant care practices changed?
Not sure

What is visible

Photo 1: Green coffee leaf surface with visible primary and secondary venation on a plain white background.

Photo 1: Irregular indentation along the leaf margin toward the lower left edge.

What this may mean

Screening status: Unable to assess

No conditions have completed review and evaluation. This demonstration provides visible observations only. It cannot identify a supported disease or confirm plant health.

What remains uncertain

This is automated initial screening. It does not confirm a disease or show that the plant is healthy.

Only a single detached leaf surface is visible without views of the opposite side or the whole plant.

Missing information

Image of the opposite leaf surface and the entire coffee plant.

Regional guidance

Your country or region is not known, so guidance applicability cannot be checked. Please ask a local agricultural officer to review these observations.

Guidance and screening limitations

PNG specific review is pending. No agricultural validation has been completed for worldwide use.

This is automated initial screening. It does not confirm a disease or show that the plant is healthy.

The farmer shares this report manually. No officer review or delivery is implied.
